

high performance PD diagnostic system

PDBase II

(single or 4-channel device)

Has your PRPD (Phase Resolved Partial Discharge) ever been affected by two or more PD activities and overlapping noise at the same time? Even very skilled operators will find hard to make a diagnosis, in situations as the one mentioned above, through a mere visual evaluation of the pattern graph. Techimp new technology bases itself on the principle that efficient separation and identification of PD data can be achieved collecting PD pulses themselves and not only, as digital instrumentation commonly available does, PD pulse peak and phase.

PDBase II® has been expressly designed as a system able to collect a large number of PD pulses and separate them according to their waveform. In order to accomplish this task, PDBase II® hardware is equipped with an ultra-wide band digitizer and integrated processing capabilities. Thanks to its fast sampling rate (200 MS/s) and its on-board processing capabilities, a considerable number of digitized PD pulse waveforms are analyzed and pulse features are stored for a further processing leading to the final PD source identification

Applications

PDBase II® is suitable for quality control purposes and periodic assessment of:

Cable and cable accessories (such as joints and terminations); Electric Generators & Motors; Power and Measurement Transformers; Gas Insulated and Air Insulated Switchgears; Outdoor Insulators for Overhead Lines (pollution assessment).

Techimp offers a wide and complete range of sensors, filters and signal conditioning devices to cover any possible PD acquisition and optimise the circuit measurement.

Specifications

Innovative instrument for Partial Discharge recording & processing
Available as single channel or 4-channel device
Ultra Wide band, fast integrated processing capability
Up to 6 PD Channels, external, line or GPS synchronized

Powerful, PD Pulse detector and Waveform analyzer Fuzzy logic diagnostic tools and statistical processing IEC 60270 compliant!

PDBase II

Techimp Ultimate Technology

Techimp technology (patented) allows different PD phenomena to be classified on the basis of their pulse shape, thus enabling further analysis to be carried out separately on each dataset. PD source identification is, so, highly enhanced and even a non skilled operator will be able to carry it out.

Techimp acquisition technology provides efficient noise rejection as well. As a matter of fact, noise signals have been observed to be very different from PD signals. Techimp classification system is really successful in separating PD phenomena from those generated by disturbances. In detail, each PD pulse waveform is acquired and the so-called equivalent time-length and bandwidth are evaluated and plotted on the TF map. Different types of discharges (e.g. PD due to distributed microvoids, slot discharges and noise in a rotating machine) shall group into different clusters in the TW map being characterized by different pulse shapes.

Wide Band Acquisition PD channel		Digital Channel	
Acquisition rate	200MS/s, 3 PD Channel	Quantity	1 digital input
Quantity	1 or 4 / 6 with MUX	Туре	high speed TTL as external trigger
Bandwidth	16 kHz ÷ 48 MHz	Casing	input or external sync
selectable	2.5 MHz ÷ 48 MHz 115÷440 kHz (IEC 60270compliant)	Dimensions	230 x 300 x 110 h mm
Resolution	12 bit	Weight	6 kg
Dynamic range	75 dB	VVOIgnt	o Ng
Maximum sampling	200 MS/s	Power Supply	
frequency	1	Voltage	85-250 Vac
Input voltage range		Maximum power consumption	40 W
Input sensitivity	< 1.0 mVpp		
Input Impedance	50 Ohm	PC platform recommended requirements	
Recording time length	1 μs (min) 40 μs (max)	Hardware	Pentium Core 2 Duo 2,0 GHz, 2 GB RAM, HDD 100 GB, 1024x680 screen resolution, Ethernet 10/100, USB.
Pre-trigger recording	0÷100% of time length		
Dead time (min)	About 1/2 acquisition time length non continuous	OS/Software	Win XP professional, MS Office for report generation, win 7
Connectors type	BNC	Communication	
Synchronization (phase reference) channel (all the detection options allow phase resolved data to be		Physical Interface	Ethernet (100-base FX, 10-base FX)
acquired).		Bit Rate	100MBps (10MBps compatible)
Input voltage range	0.1 Vrms ÷ 200 Vrms	Communication Protocol	TCP-IP
Frequency range	0.1 ÷ 2000 Hz		ST
Phase resolution	<1 degrees referenced on phase to ground voltage reference	Connector type	
Connector type	BNC	Operating environmental conditions	
Internel Line Sync	hronization	Temperature	-5 to 50 °C
Quantity	1	Humidity 90%, not condensing	
Sampling frequency	100 kS/s	General	updating via internet connection to
Resolution	16 bit	Firmware	Techimp website
Narrow bandwidth Analog Channels (for synchronisation or other analogue signals monitoring)		Certifications	IEC 60270 compliance both for Hardware and Software.
0,	-	Options	
Quantity Sampling	5	Location tool (for cables), max length 2km, sensitivity 10m (*)	
frequency	100 kS/s	Spectrum Analyzer tool, max Frequency 50MHz	
Resolution	16 bit	Techimp SW for IEC 60270 compliance	
Input impedance	10 ΜΩ	PD Calibrator, range 1-100pC	
Full scale values	0.5, 2.5, 5.0, 25, 50, 100 V	GPS (**)	
1st order Low Pass	15, 30, 75, 150, 300, 750, 1500 Hz	Quality Control Software add-on	

The Product

PDBase II® is provided with different acquisition modes to give maximum measurement flexibility.

It is able to perform PD tests within a broad frequency range for various applications.

PDBase II® takes advantage of three main acquisition modes: 2 diagnostic and one standard.

In standard mode a hardware filter (integrated in the system) narrows the band of the system, thus complying the requirements of IEC60270 STD.

The software

The PDBase II® acquisition software holds all the needed functions to control the instrument, to set the correct acquisition parameters, to acquire and visualize the PD dataset in order to get an immediate diagnostic response.

PDProcessing and Quality Control addon are software that allow the acquired data files to be processed for a deep analysis of the detected phenomena.

- actual performances may change depending on test conditions
 - conditions
 The system can be equipped with an optional GPS
 module for precise absolute time acquisition over all
 channels, which may be used for PD location by means
 of the Time of Flight technique from 2 different
 locations
